The Bone Conduction

Hearing is an important part of every child's learning process. For children with conductive or mixed hearing loss or single sided deafness **Junior BC** is a natural alternative for hearing. The sound is transmitted through the bone directly into the internal ear.

Junior bc: Low weight and small hearing module for children and youngsters.

Junior BC for kids
Junior BC is a full digital bone conduction hearing system developed especially for children. It consists of a very small and discreet housing with miniature receiver.

Easy mounting
Junior BC will be simply fitted onto your personal headaddresses like headband and caps by your hearing aid specialist.*

Simply comfortable
Hardly noticeable and nearly invisible *Junior BC* offers your child a maximum of hearing and wearing comfort and at the same time highest functionality **without surgery.**

These are advantages that let *Junior BC* differ from comparable bone conduction hearing systems of other producers.

* First your acoustician tests whether your personal headband is suitable. Then *Junior BC* can be fitted.
