

Bone conduction systems

nowadays there are better and better options to compensate the functions of the acoustic organ.

Bone conduction systems can assist when the inner ear is intact but the outer or middle ear is unable to transmit sound.

The sound is then transmitted in the form of mechanical vibrations through the bone and converted into a nerve impulse.

Such systems should of course be discrete, comfortable to wear and easy to operate.

We at **bruckhoff hannover** are specialists for many years and have been setting the standards in hearing loss solutions, both technically and in terms of comfort and design.

With the *C.A.I. BC System* you have a high quality product „Made in Germany“.

Individual and elegant

C.A.I. BC System is the individual and elegant way of reducing or even eliminating hearing loss of outer ear or middle ear.

Modern and up to date

Wearing comfort and look are equivalent like a bluetooth headset.

Exclusive and comfortable

Enjoy a unique hearing system which is individual, exclusive and comfortable to wear, making it agreeably different from comparable bone conduction hearing systems.
